MPC mimics Bio-membrane

"MPCoat®," is a material that mimics the structure of biological tissue. Once MPCoat® is coated on a device, blood, proteins, and other biological components recognize its surface as living tissue, and do not cause a biological reaction. MPCoat® adapts various medical devices to fit the human body.

DCP microarray for prediction of allergy incidence

Allergy is an increasing national disease for which there is no curative treatment. The definitive diagnosis of food allergy is made by oral food challenge (OFC), which carry a risk of anaphylaxis, so the development of high performance diagnostic biomarkers is desired as an alternative of OFC.

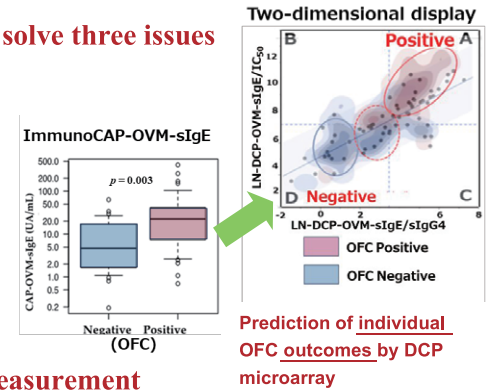

Three issues in the current allergy diagnosis

1. Current antigen-specific IgE (sIgE) titers measure the 'quantity' of antibodies and not the 'quality' (antigen-binding avidity) of the antibodies involved in the development of allergy, making allergy diagnosis difficult due to the poor correlation between sensitivity and severity.
2. OFCs used for definitive food allergy diagnosis can only be performed in specialized hospitals, as they are sometimes associated with anaphylaxis, and the development of high-performance diagnostic biomarkers that can be performed in all hospitals is strongly desired to replace OFCs.
3. Current immunological antibody tests are not able to make an individual diagnosis, although they can detect statistically differences between the allergy group (OFC-positive) and the non-allergy group (OFC-negative).

DCP microarray is designed to solve three issues

Two-dimensional display of sIgE (quantity) × antigen binding avidity (1/IC₅₀, quality) as sensitivity and sIgE/sIgE-blocking antibodies of (sIgG1+sIgG4) ratio as severity with the cutoff values of OFC positivity and negativity enables a high correlation between sensitivity and severity and allergy diagnosis individually.

Benefits of DCP microarray measurement

1. Rapid measurement of multiple samples and binding avidity.
2. High correlation between sensitivity and severity of allergic reactions. Two-dimensional display of these parameters showing individual attribution of allergy incidence for each person
3. Estimation of allergen maintenance dose, reduction of OFC frequency, presentation of next allergen challenge doses for OFC -positive and -negative individuals.

Japan's Welded tube mill for Stainless steel medical needle production

Cannula needle, biopsy needle welded tube mills have been supplied over 130 units in 50 years to medical care majors, which have acquired utmost trusts and reputations. Due to increase in vaccination businesses in these years, the series have been popular and top-seller, which firmly support medical care industry.

Ideal weld quality can be achieved by high-precision forming rolls and roll stations which are processed and assembled with high precision. TIG/ Plasma/ Laser weld is available.

**We are able to introduce the maker who supplies post-processing equipment such as plug drawing, sinking, straightening, cutting, polishing machines.

Mori Machinery Corporation

- One of the largest tube mill makers in the world
- 67 years in the industry
- Japan's No.1 share in non-ferrous raw material tube mills
- Specialized in smaller OD tube mills such as 2-160mm with wall thickness 0.05- 10mm

Messe Düsseldorf Japan, Ltd.
30 Years' Experience in Japan's Medical Sector

COMPAMED

When it comes to the Japanese medical and healthcare market, there are few companies who have the same experience and insight that Messe Düsseldorf has. For the past 30 years, Messe Düsseldorf Group has been operating in Japan via its subsidiary Messe Düsseldorf Japan, Ltd., bringing Japanese exhibitors and visitors to the MEDICA & COMPAMED in Düsseldorf and our medical trade shows worldwide which is under the brand name MEDICAlliance. During this time, we have built close relations with all major Japanese medical associations and other industry groups, and we have been continually monitoring the domestic medical and health-related devices market. Naturally, we follow international trends as well. Through our presence at the leading Japanese medical trade fairs, we exchange opinions with industry leaders and players, many of whom are repeat exhibitors at Messe Düsseldorf trade shows.

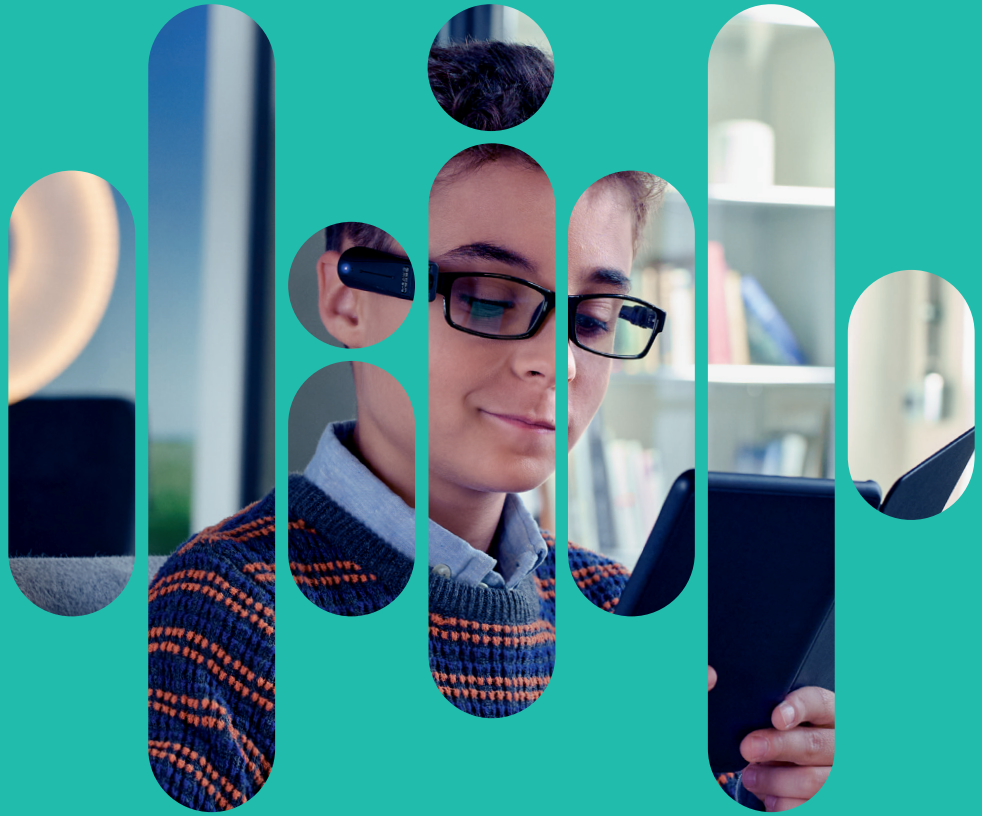

Ms. Akiko Ohara, President

Mr. Benjamin Rabe, Project Manager /

MEDICA, COMPAMED, REHACARE,
MEDICAlliance, MEDICARE Asia
